### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 07 June 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. ***Claims 1, 2, 4, 5, 9-15, 19-22, and 24-26*** are rejected under 35 U.S.C. 102(e) as being anticipated by Bijman et al. (United States Patent 6,590,973), hereinafter referenced as Bijman.

Regarding **claim 1**, Bijman discloses a system and method for detecting an off-hook condition. In addition Bijman discloses a method comprising: transmitting a signal having at least a portion of the transmitted signal from the subscriber line; receiving at least a portion of the transmitted signal from the subscriber line; determining at least a portion of a period of the AC component based on the received signal; and performing a function of a line card in response to determining at least the portion of the period of the AC component; as disclosed at column 3, line 24 through column 4, line 18 and exhibited in figures 3 and 4.

Regarding **claim 2**, Bijman discloses everything claimed as applied above (see claim 1), in addition, Bijman discloses wherein the signal is a ringing signal and wherein

performing the function includes performing ring-trip detection, as disclosed column 3, line 24 through column 4, line 18 and exhibited in figures 3 and 4.

Regarding **claim 4**, Bijman discloses everything claimed as applied above (see claim 1), in addition Bijman discloses wherein determining at least the portion of the period includes determining at least one zero crossing of the AC component, as disclosed at column 3, line 24 through column 4, line 18 and exhibited in figures 3 and 4.

Regarding **claim 5**, Bijman discloses a method comprising transmitting a ringing signal, which reads on a signal having at least one of an AC component and a DC component, to a subscriber line; receiving at least a portion of the transmitted signal from the subscriber line; filtering the DC component from the received signal; determining a value proportional to a power of the AC component of the received signal over at least a portion of a period of the AC component; and performing a function of a line card in response to determining the value proportional to the power of the AC component, as disclosed at column 2, lines 5-22; column 3, line 24 through column 4, line 18 and exhibited in figures 2-4.

Regarding **claim 9**, Bijman discloses everything claimed as applied above (see claim 5), in addition, Bijman discloses wherein the signal is a ringing signal and wherein performing the function includes performing ring trip detection, as disclosed at column 3, line 24 through column 4, line 18 and exhibited in figures 3 and 4.

Regarding **claim 10**, Bijman discloses everything claimed as applied above (see claim 5), in addition, Bijman discloses wherein the signal is a fault detection signal and

Art Unit: 2614

wherein performing the function includes performing AC-fault detection, as disclosed at column 10, line 21-59 and exhibited in figures 3-7.

Regarding **claims 11-15, 19-22, and 24-26**, are interpreted and thus rejected for the reasons set forth above in the rejection of claims 1, 2, 4, 5, 9 and 10.

***Allowable Subject Matter***

2. ***Claims 3, 6-8, 16-18, 23 and 27-30*** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

3. Applicant's arguments with respect to claims 1-26 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jefferey F. Harold whose telephone number is 571-272-7519. The examiner can normally be reached on Monday - Friday 9 am - 5:30 pm.
